

Sapphire

Why Choose a Sapphire Boiler?

Many factors can dictate the savings that can be achieved in today's world when it comes to home heating consumption.

Radiator size, loft insulation and double glazing to name a few.

If you are off the mains gas grid, chances are your boiler is oil fired.

We have created an innovative solution to design the most efficient oil-fired boiler on the market.

Technology has not progressed much over the years in this industry, until now.

About Us

Introducing the new Sapphire Oil Boiler from EOGB, a UK based manufacturer with over 30 years of experience in the Domestic Oil heating industry.

The Sapphire is a fully modulating, Blue flame oil-fired boiler that utilises OpenTherm communications from controls such as, Honeywell Evohome and EPH to maximise the efficiency of the boiler and reduce the fuel consumption and CO₂e emissions that is on everyone's mind at the moment.

Sapphire is the perfect solution for decarbonising as it can be converted from Kerosene to HVO bio-liquid very easily.

Future-Proof your Liquid Fuel Heating System with Sapphire now!

REDUCE YOUR HOMES ENERGY CONSUMPTION

Performance of a Modern Condensing Boiler compared to Sapphire

Appliance	Outside Temperature (C)	Target Temperature (C)	Fuel Usage (kWh)	Electrical Usage (kWh)
Modern Condensing Boiler	6	21	220	1.87
Sapphire Boiler	6	21	152	0.66
Modern Condensing Boiler	11	21	174	1.50
Sapphire Boiler	11	21	121	0.52

*Figures shown are from test data acquired at KIWA Ltd

- Test house data to prove a saving of 15% on fuel usage, compared to a modern condensing boiler. This due to Sapphire's unique modulating control.
- In excess of 100 litres per month reduction in fuel consumption in "real world" installations.
- Fast return on investment compared to any other boiler on the market.
- No corrosion issues thanks to the fully stainless steel construction. Perfect for low temperature heating systems.

Such is the quality of our Heat Exchanger, we are proud to offer a 25-Year Warranty!

How can we offer this?

Our Heat Exchanger is 316Ti and designed to last a lifetime. Other boilers are often constructed of mild steel and is less resistant to corrosion.
